Profile

Final-year Software Engineering (Honours) student at Macquarie University with experience in full-stack development, data-driven problem solving, and systems design. Demonstrated ability to translate technical solutions into business-focused outcomes through projects involving real-time systems and web platforms. Experienced in collaborating with stakeholders and approaching problems from both technical and organisational perspectives. Interested in applying technology, data, and analytical thinking to solve complex business challenges in a consulting environment.

Skills

- **Technical:** Java, JavaScript (Node.js, React), Python, SQL (PostgreSQL/Supabase), REST APIs, Full-Stack Web Development
- **Data & Analysis:** Microsoft Excel (advanced functions, data analysis, data handling), Data Interpretation, Debugging, Systems Thinking
- **Tools & Technologies:** Git/GitHub, AWS, Agile/Scrum, JSON, Figma
- **Professional:** Stakeholder Communication, Team Collaboration, Problem Solving, Adaptability, Client-Focused Thinking

Experience and Projects

Software Engineer - Snabbt July 2025–Present

- Led development of a React-based POS system, designing payment and refund workflows to address real-world business requirements and improve transaction efficiency, accuracy, and usability
- Collaborated with and worked on backend systems to ensure accurate real-time data handling and API integration across the platform
- Translated user and business requirements into scalable UI solutions, improving system reliability and user experience

Full-Stack Developer & Designer (Self-Directed Project) - PrepWise 2026–Present

- Concepted, architected, and built an interactive career readiness web application using Next.js and Supabase, driving end-to-end design and implementation
- Integrated LLM API endpoints to process user resume inputs and deliver automated, actionable resume feedback and interview preparation insights
- Designed system architecture with future scaling in mind, targeting multi-format document parsing, job-description matching algorithms, and enterprise integration capabilities

Faculty Board Student Member - Macquarie University May 2025–Present

- Represent student interests in faculty-level governance and contribute to discussions on academic strategy and curriculum development
- Engage with academic and administrative stakeholders to support informed decision-making through analysis of student and academic needs

- Develop professional communication and leadership skills within a formal board environment

IT Intern - Sydney Contracting Engineers

December 2025–June 2026

- Improved website performance and usability through custom CSS and WordPress enhancements
- Supported search engine optimisation by analysing site visibility and implementing targeted content improvements
- Researched and evaluated web management tools to improve operational efficiency and streamline maintenance processes

Software Engineering Project - Monorail Automation (Blade Runner)

2024

- Developed the Master Control Program using JSON over UDP to manage real-time communication between distributed system components
- Ensured reliable data exchange across subsystems through iterative testing and debugging of network interactions
- Collaborated within a multidisciplinary team to design and implement a coordinated control system

Software Engineering Project - Automated Bridge System (Opening Bridge)

2025

- Designed and implemented a sensor-driven control system to manage bridge operation and traffic flow
- Integrated hardware inputs with control logic to ensure safe and reliable system behaviour under varying conditions
- Applied structured engineering processes to improve modularity, testing, and overall system reliability

Software Developer - Pod Buddy (Poddium)

2025

- Contributed to a collaborative web application using scalable cloud-based architecture
- Developed features including content management, analytics, and payment integration
- Worked across frontend and backend components to support a cohesive and responsive user experience

Student Intern - RMSI

November 2020–December 2020

- Gained foundational knowledge of telecommunications infrastructure, including NBN, ADSL, and FTTN systems
- Explored network components such as DSLAMs and fibre deployment methods
- Observed practical workflows involved in service provisioning and infrastructure setup

Education & Awards

Bachelor of Engineering (Honours) - Software Engineering

Macquarie University

2023–November 2026

Relevant focus areas: Software Engineering, Databases, Secure Systems, Distributed Systems

G2G Women in STEM Scholarship (2024) - Awarded for academic merit and leadership potential.

High School Certificate

Wyndham College / Concord High School

2017–2022

Information Processes & Technology Award (2022) - Performance in information systems.

Relevant Coursework

- Software Engineering and System Design
- Database Design and Data Management

- Object-Oriented Programming and Application Development
- Secure Application Development and Cyber Security
- Networking and Distributed Systems Fundamentals

Leadership & Extracurricular

Events Team - Sydney Telugu Youth Association (STYA)

January 2025-February 2026

- Organising community events for youth empowerment and cultural awareness.
- Developing project management, teamwork, and cross-cultural communication skills.

Interests

- Data-driven decision making and applying analytical approaches to complex business problems
- Large-scale enterprise systems and digital transformation in organisations
- Risk, security, and system reliability in technology-driven environments
